## KIDS CODING

be the future

# WHAT IS BLOXELS?

Bloxels is an online platform for kids to design, build, collaborate, and tell stories through video game creation. Bloxels leverages student keenness for video game design by creating an environment where learning is fun, interactive, and informative.

Video game design concepts, techniques, and skills are developed through the course, enabling children to build, code, play, share, and collaborate alongside peers. Not only can students see the authentic results of their own game, they can share their games with students around the world, experiencing the joy of others playing their game.
